### About the ARxChange®

Today's trends make it more difficult than ever to manage margins and collect on bad debt, which is why the nation's leading health systems, physician practices, revenue cycle firms and debt recovery agencies are converting to the ARxChange® -- the most widely used centralized online resource for **REAL TIME**:

### Bad Debt Segmentation and Payment/Collection Analysis

ARxChange® assigns expected financial performance to bad debt by leveraging independent credit and demographic data from multiple sources to estimate the financial condition of every account receivable.

### Automated Bad Debt Account Management

ARxChange® automatically triages accounts into charity care, government funded programs, prompt payment/patient discount programs, internal payment plans and/or cash-collection buckets. This approach maximizes debt performance, financial counseling, and correctly identifies charity accounts from those eligible for multiple public programs.

### Real-Time Marketplace Bad Debt and Active AR Disposition

ARxChange® assigns a fair market value to patient debt and/or active AR and then posts portfolios for bids onto a secure trading platform at prevailing market rates. Here, the industry's top debt servicers offer immediate and/or month-over-month guaranteed returns that outperform current returns by upwards of 20%.

### Authentication

ARxChange® authenticates guarantor data and demographic information at the point of registration, which mitigates downstream revenue cycle payment, recovery and collection issues.

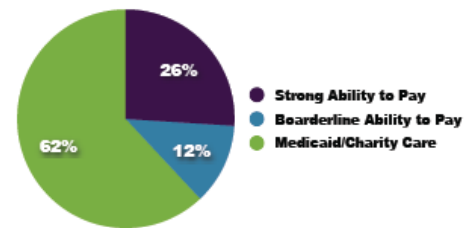

### Third-Party Denial Reviews

ARxChange® applies advanced data mining techniques/algorithms to detect insurance recovery opportunities in self-pay portfolios. This process acts as a "second set of eyes" to overturn denial determinations so that any recoverable revenues have been identified, reviewed, sourced, and ultimately captured.
